Subjective:

Walk in

CC: Dressing of the right foot

This is a 74 years old female with complicated past medical history of DM 2, diabetic neuropathy, end-stage renal disease on hemodialysis, hypertension with fluctuation BP, hyperlipidemia, Lower extremity DVT finished Eliquis complicated by GI bleed and H. pylori status post treatment, peripheral arterial disease in the right lower extremity status post revascularization, right foot dry gangrene secondary to arterial insufficiency presented today for above cc.

Patient has been following up regularly with UCSD hyperbaric oxygen clinic, she denies any new complaint. Stated no pain or discharge. She also getting dressing with home health and pace RN when she is in the clinic.

Patient History Entered on: 12/27/2016

Patient History: DM2 insulin-dependent, controlled Diabetic neuropathy Diabetic retinopathy History of upper

GI bleed status post blood transfusion Gastric ulcer on endoscopy 11/20/20 HTN-- Dr. Namazi ESRD on
dialysis: Tues/Thurs/Sat Anemia Cataract Hyperlipidemia

Family History: DM/HTN

Social History: Tobacco: no EtOH: no Drug: no

Surgical History: Right port for dialysis fistula on left arm, early Dec 2016 11/7/20: endoscopy showed 2cm ulcer within gastric antrum no evidence of bleeding vessels at Sharp admission Right lower extremity revascularization January 2025

Objective:

BP: 180/80 **HR:** 72 **RR:** 16 **T:** 0.0 **WT:** 0 lbs. 0.00 oz. **BMI:** 0.00

GEN: NAD, WNWD, appears stated age

HEENT: NCAT, oropharynx clear, mucous membranes moist, neck supple

CV: RRR, no m/r/g

Resp: CTAB, no w/r/c

Right foot is well-perfused, dry gangrene noted on the first and second toes appears slightly improving especially on the big toe. No discharge or erythem appreciated. see photo

Assessment/Plan:

Problems addressed this Visit :

- **Arterial Ulcer Of Foot-**  70715[I10: L97.501].
- Peripheral Arterial Disease- 4439[840580004].

She had prompt wound care at FHCS, she also is getting dressing 2-3 times a week by HH and by pace nurse. She was following up with upperline podiatry last seen 2/7/25 recommendation was to refer patient to hyperbaric oxygen therapy, Patient was seen by hyperbaric medicine at UCSD and started on hyperbaric oxygen therapy She got multiple sessions so far and foot gangrenous lesion appears to be improving on exam today.

Continue hyperbaric oxygen therapy at UCSD.

RN case manager to reach out to UCSD hyperbaric oxygen regarding wound dressing recommendations.

I spoke to patient today and explained to her that if her lesions is not improving amputation might be needed, she understood that.

- **History of - gastric ulcer-** V1271[I10: Z87.11].

Patient with prior of gastric ulcer, recently after revascularization surgery she was started on dual antiplatelet therapy with aspirin and Plavix and developed melena. Melena was intermittent and after hemoglobin stabilized and improved she was restarted on aspirin after discussing with vascular. She was sent urgently to gastroenterology and she was seen by Dr. Banaie office 3/11, She was supposed to receive EGD mid April but I was informed by Sandra referral specialist that it was canceled and supposed to be rescheduled by gastroenterology office which has not been done yet.

Patient today reports brown stool denies any rectal bleeding.

Continue Protonix 40 mg twice daily.

ER precautions provided.

• **Hypertension** 4019[I10: I10].

BP is elevated today in the clinic, she denies any numbness or tingling or chest pain.

BP was repeated twice after her first high reading and treatment elevated.

Clonidine 0.1 mg ordered.

Balboa nephrology requesting referral for Consultation with Dr. Chongkraitanakul, Tepsiri . Ptp will be seen at Sharp Memorial Hospital Kidney Transplant Center.

• **Consult** : NEPHROLOGY (VERIFY AUTH REQUIREMENT) [Referral Valid until 11/29/2025] Consult,
